Energy exploration is key to the development of any functional society in this industrial world. Without energy, there is no consent for any modern civilization to exist.

□

In the Philippines, our experience with energy exploration includes:

□

- Geological survey of potential petroleum fields
- Evaluation of the hydrocarbon potential

- Burial history and maturity modeling

- Interpretation of airborne gravity and aeromagnetic surveys

- Depth conversion of seismic data

- Sequence stratigraphy

- Preparation of farmout brochures

- Application for a Coal Operating Contract

- Geological Investigation

Energy exploration

- Block Boundary Survey

- Sub-surface investigation

- Coal Analysis

- Pre-feasibility studies
